

Available via Wabtec's e-commerce web site, **WabLink™**, Wabtec Managed Inventory (WMI) assists customers in recording real-time inventory data and eliminates the need to place orders for replacement stock.

## HOW DOES WMI WORK?

### WMI at CSXT

In 2002, one of North America's largest railroads, CSX Transportation, selected Wabtec Global Services to exclusively maintain an inventory of nearly 40 products at ten locations for a period of ten years. Through close work with CSXT and the use of Wabtec's Quality and Performance system (QPS) tools, Wabtec Global Services automated the process for supplying replacement parts. As a result of the program, CSXT now receives only what is needed when it is needed and enjoys lower costs, increased operating efficiencies and reduced inventories as a result of WMI.

*WabLink™ automatically generates orders for replenishment parts when customer inventory levels reach predetermined minimums. Customers utilize WabLink™ to manage usage, receive/return material, generate reports and to track shipments.*

## BENEFITS INCLUDE:

### DECREASED INVENTORY MANAGEMENT COSTS

- Significant inventory reduction through optimized pool size and mix.
- Dramatic decrease in purchase orders and invoices (1 per week)
- Reduced transportation costs

### BETTER INVENTORY MANAGEMENT

- One interface, multiple products
- Real time visibility and reports

### PEACE OF MIND

- Automatic ordering with rapid turn around and delivery ensures material availability
- Wabtec quality
